

**YOUR GO TO SUPPLIER FOR
HIGH QUALITY SYSTEMS THAT PROTECT**

A TRUSTED UK MANUFACTURER

Why Wait... for an Accident to Happen?

At Reliable Barrier Systems Ltd, we specialise in high-quality safety and protection solutions for airports, car parks, warehouses, industrial sites, and public spaces. With a commitment to excellence, we provide bespoke solutions tailored to each client's needs, ensuring maximum durability and reliability.

Led by Rod Laight, alongside barrier expert Michelle Horton, our team brings over 30 years of combined experience in designing and manufacturing industry-leading safety barrier systems. This extensive expertise enables us to understand your specific requirements and deliver solutions that perform under the toughest conditions.

Our comprehensive range includes custom Armco barriers, box beam systems, column protection, car park barriers, handrails, and full mesh or mesh infill solutions - all designed to enhance safety, protect assets, and create secure working environments; and all conforming to BS6399 standards and the new European Specificator BS EN 1991 1.1.

Areas of Expertise

We specialise in vehicle safety systems across sectors where security is paramount.

CAR PARKS

Car parks experience constant traffic flow, making reliable vehicle restraint systems essential.

Our installations ensure a safe, well-organised parking environment, providing peace of mind for customers and operators alike.

INDUSTRIAL

A safe working environment is essential in any industrial setting. Our robust Armco barriers and vehicle restraint systems enhance workplace safety, protecting staff, equipment, and company assets.

WAREHOUSE

A well-protected warehouse is key to smooth and efficient operations. Our vehicle restraint systems help safeguard personnel, equipment, and inventory, ensuring a safe and organised working environment.

OFFICES

Our expertise ensures office premises remain safe areas and allow your business to run smoothly and safely.

Partner with us for expert advice and tailored solutions that put safety first.

Access & Traffic Control

Improve access and traffic management

Effective access and traffic management are essential for maintaining safety in high-traffic commercial environments. By implementing robust vehicle control systems, we help reduce the risk of accidents in areas where pedestrians, vehicles, and infrastructure intersect.

Our solutions enhance traffic flow, minimise congestion, and create safer, more organised spaces for both workers and visitors.

Column Protection

Protect your columns from impacts or accidents

Investing in column protectors for warehouses and car parks enhances safety, safeguards assets, and helps maintain the structural integrity of your facility - all while reducing costly repairs.

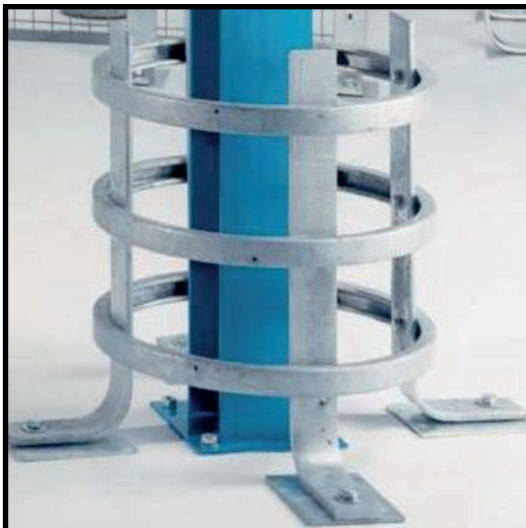

IMPACT PROTECTION:

Designed to absorb impact, column protectors act as a barrier between vehicles, equipment, and structural columns, minimising collision damage and preventing costly structural repairs.

Their high visibility also improves workplace safety by increasing awareness and reducing the risk of accidents.

Reliable Barrier Systems provide a range of column protection solutions, designed to fit various column sizes and ensure maximum impact protection.

MONOSTRUT RAIL

System consisting of:

- 3 x MONOSTRUT HOOPS
- 4 X SPL610SG 200mm
FOOT POSTS
- 4 x 200mm LONG X 150mm
BASE PLATES
- 4 x ANCHOR BOLTS

WAILING RAIL

System consisting of:

- 4 x(2) x WAILING RAIL SEMI-
CIRCLES
- 4 X SPL610MG POSTS
- 4 x 300mm x 150mm BASE PLATES
- 4 x(2) JOINING PLATES
- 4 x ANCHOR BOLTS

Handrail & Mesh Panels

Ensure pedestrian safety with our durable, expertly designed handrails and mesh panels, providing reliable protection in high-traffic areas.

Our handrail systems create a clear distinction between pedestrian walkways and vehicle zones in warehouses, loading bays, car parks, and industrial sites. Engineered to reduce the risk of collisions, our handrails and mesh panels enhance protection for both workers and vehicles in high-risk areas, promoting a safer and more efficient working environment.

Bespoke designs to suit your required protected areas.

SYSTEMS BUILT TO PROTECT

Patented Deflex Bollard

Our reliable spring mounted Deflex Bollard was patented in June 2018 and is an innovative solution to more traditional access-blocking bollards which can cause damage to ground foundations when hit.

The concealed steel wire spring in the base unit absorbs energy on impact, providing deflection which also minimises damage to the vehicle. Following impact the post returns to the upright position, ready to perform once again.

We have a full range of bollards, bolt down or concrete - in a choice of materials, steel tube, stainless or plastic.

Suitable for supermarket car parks, multi story car parks, lorry parks, street furniture, industrial use.

Supply Only

For those who prefer to handle installation in-house, our supply-only service provides high-quality safety solutions delivered directly to your site, ready for installation.

If installation is required, we have a number of excellent installation contractors who are ready to assist you with your requirements.
